NEW QUESTION: 4

DB1 is a multi-availability zone Azure SQL Database Premium instance, and it is configured with a prefetch interval of 15 minutes. What happens when the prefetch interval is changed to 30 minutes?

The prefetch interval change does not take effect until the tacmd refreshPrefetch command is run. A server restart is required to implement the change. The prefetch interval change takes effect after the next summarization cycle. The server does not need to be restarted.

- A. Azure SQL Database Premium
- B. Azure SQL Database Premium
- C. Azure SQL Database Premium
- D. Azure SQL Database Premium

By default, the cluster of nodes for the premium availability model is created in the same datacenter. With the introduction of Azure Availability Zones, SQL Database can place different replicas of the Business Critical database to different availability zones in the same region. To eliminate a single point of failure, the control ring is also duplicated across multiple zones as three gateway rings (GW). The routing to a specific gateway ring is controlled by Azure Traffic Manager (ATM). Because the zone redundant configuration in the Premium or Business Critical service tiers does not create additional database redundancy, you can enable it at no extra cost. By selecting a zone redundant configuration, you can make your

Answer: A

Explanation:

By default, the cluster of nodes for the premium availability model is created in the same datacenter. With the introduction of Azure Availability Zones, SQL Database can place different replicas of the Business Critical database to different availability zones in the same region. To eliminate a single point of failure, the control ring is also duplicated across multiple zones as three gateway rings (GW). The routing to a specific gateway ring is controlled by Azure Traffic Manager (ATM). Because the zone redundant configuration in the Premium or Business Critical service tiers does not create additional database redundancy, you can enable it at no extra cost. By selecting a zone redundant configuration, you can make your

Premium or Business Critical databases resilient to a much larger set of failures, including catastrophic datacenter outages, without any changes to the application logic. You can also convert any existing Premium or Business Critical databases or pools to the zone redundant configuration.
