A. ã,·ãƒ³ã,ºãƒ«ãƒ>ãƒ¼ãƒ
B. ãƒ•ã,¤ãƒ³ãƒ^ãƒ„ãƒ¼ãƒ•ã,¤ãƒ³ãƒ^
C. ãƒ•ãƒ«ãƒ¡ãƒƒã,·ãƒ¥
D. ãƒ•ãƒ-ã,¢ãƒ³ãƒ‰ã,¹ãƒ•ãƒ¼ã,¯
Answer: C

NEW QUESTION: 2
You are adding a new REST service endpoint to the

FlightDataController controller that
returns the total number of seats for each airline.
You need to write a LINQ to Entities query to extract the
required data.
Which code segment should you use?

A. Option C
B. Option A
C. Option D
D. Option B
Answer: C
Explanation:
Topic 6, ASP.NET MVC
Background
You are developing an ASP.NET MVC application in Visual Studio
2012 that will be used to process orders.
Business Requirements
The application contains the following three pages: - A page
that queries an external database for orders that are ready to
be
processed. The user can then process the order.
- A page to view processed orders.
- A page to view vendor information.
The application consumes three WCF services to retrieve
external data.
Technical Requirements
Visual Studio Solution:
The solution contains the following four projects. -
ExternalQueue: A WCF service project used to communicate with
the external order database. - OrderProcessor: An ASP.NET MVC
project used for order processing and logging order metadata. -
OrderUpload: A WCF service project used to submit order data to
an external data source. - Shipping: A WCF service project used
to acquire shipping information.
ExternalQueue Project:
Entity Framework is used for data access. The entities are
defined in the ExternalOrders.edmx file as shown in the
following diagram.

The project contains two services defined in the following
files. - IExternalQueueService.es
- ExternalQueueService.svc.
The ExternalQueue.Helpers namespace contains a definition for a
class named OrderNotFound Exception.
OrderProcessor Project:
Entity Framework is used for data access. The entities are
defined in the ProcessedOrders.edmx file as shown in the
following diagram.

The classes are contained in the OrderProcessor.Entities
namespace. The project contains
the following two controllers. - InboundQueueController.es -
ProcessedOrderController.es

WCF service proxies to the ExternalQueue, Shipping and OrderUpload services have been generated by using the command prompt. The ExecuteCommandProcedure() method in the ExternalQueueService.svc file must run asynchronously. The ProcessedOrderController controller has the following requirements.

The GetVendorPolicy() method must enforce a 10 minute absolute cache expiration policy.

The GetProcessedOrders() method must return a view of the 10 most recently processed orders.

OrderUpload Project:

The project contains two services defined in the following files: - IUploadCallbackService.es - UploadCallbackService.svc Data Access is maintained in a file named UploadOrder.es.

Shipping Project:

Entity Framework is used for data access. The entities are defined in the ExternalOrders.edmx file as shown in the following diagram.

The Custom Tool property for ExternalOrders.edmx has been removed.

POCO classes for the Entity Model are located in the ShippingAddress.es file. The POCO entity must be loaded by using lazy loading.

The project contains two services defined in the following files.

- IShippingService.es
- ShippingService.svc.

The IShippingService contract must contain an operation that receives an order number as a parameter. The operation must return a class named ShippingInfo that inherits from a class named State.

Application Structure

NEW QUESTION: 3

A Chief Information Security Officer (CISO) is concerned the development team, which consists of contractors, has too much access to customer data. Developers use personal workstations, giving the company little to no visibility into the development activities.

Which of the following would be BEST to implement to alleviate the CISO's concern?

A. DLP

B. Test data

C. NDA
D. Encryption
Answer: A

NEW QUESTION: 4
A customer wants to improve their network bandwidth. What is one method they could use?
A. Shared Ethernet Adapter
B. Host Ethernet Adapter
C. Link Aggregation
D. VLAN
Answer: C
