NEW QUESTION: 3
Identify the scenarios in which the RMAN CROSSCHECK command is useful. (Choose all that apply.)
A. To synchronize the actual files on disk or in the media management catalog with the RMAN repository for which the backup was not taken using RMAN.
B. To update the RMAN repository if you delete archived redo logs with operating system commands.
C. To check that the obsolete backups are deleted from the repository records and from the disk.
D. To update outdated information about backups that disappeared from disk or tape or became corrupted and inaccessible.
Answer: B,D
Explanation:
Explanation/Reference:
Explanation:
Crosscheck are useful because they can do the following: (Link)
Update outdated information about backups that disappeared from disk or tape or became corrupted

Update the repository if you delete archived redo logs or other files with operating system commands

Use the CROSSCHECK command to synchronize the physical reality of backups and copies with their logical records in the RMAN repository.
The CROSSCHECK command checks only objects marked AVAILABLE or EXPIRED in the repository by examining the files on disk for DISK channels or by querying the media manager for sbt channels.
Meaning of Crosscheck Status:
EXPIRED
Object is not found either in file system (for DISK) or in the media manager (for sbt). A backup set is EXPIRED if any backup piece in the set is EXPIRED.
The CROSSCHECK command does not delete the repository records of the files that it does not find, but updates their repository records to EXPIRED. You can run DELETE EXPIRED to

remove the repository records for expired files and any
existing physical files whose status is EXPIRED.
If backups are EXPIRED, then you can re-execute the crosscheck
later and determine whether expired backups are available. This
precaution is especially useful when you use RMAN with a media
manager.
For example, if some backup pieces or copies were erroneously
marked as EXPIRED because the PARMS channel settings were
incorrect, then after ensuring that the files really do exist
in the media manager, run the CROSSCHECK BACKUP command again
to restore those files to AVAILABLE status.
AVAILABLE
Object is available for use by RMAN. For a backup set to be
AVAILABLE, all backup pieces in the set must have the status
AVAILABLE.
