Explanation:

Stream1 - Azure Event  
Stream2 - Blob Storage  
Azure Event Hubs is a highly scalable data streaming platform and event ingestion service, capable of receiving and processing millions of events per second. Event Hubs can process and store events, data, or telemetry produced by distributed software and devices. Data sent to an event hub can be transformed and stored using any real-time analytics provider or batching/storage adapters. Event Hubs provides publishsubscribe capabilities with low latency at massive scale, which makes it appropriate for big data scenarios.  
Stream1, Stream2 - Blob Storage  
Stream Analytics has first-class integration with Azure data streams as inputs from three kinds of resources:  
Azure Event Hubs  
Azure IoT Hub  
Azure Blob storage  
These input resources can live in the same Azure subscription as your Stream Analytics job or a different subscription.
