**NEW QUESTION: 2**

An administrator is troubleshooting a performance problem with a virtual machine (VM). The VM and ESXi host configuration is as follows:

The application which runs within the virtual machine is highly sensitive to memory latency, but has low

processor utilization.  
The virtual machine has 6 vCPUs.

The ESXi host CPU topology has 2 Physical CPU Sockets, each with 8 Logical CPUs.

The ESXi host CPU has Hyper Threading enabled.

The administrator would like to improve CPU performance for this VM. Other VMs on the host have no performance issues. Which action should the administrator take to resolve the issue?

- A. Set the Advanced Parameter numa.vcpu.preferHT = FALSE in the virtual machine configuration file.
- B. Set the Advanced Parameter numa.vcpu.preferHT = TRUE in the virtual machine configuration file.
- C. Set the Advanced Parameter numa.PreferHT = 1 in the ESXi host configuration file.
- D. Set the Advanced Parameter numa.PreferHT = 0 in the ESXi host configuration file.

**Answer: B**

Explanation:

Explanation/Reference:

Set advanced parameter numa.vcpu.preferHT = TRUE in the VM configuration file to increase CPU performance.

**NEW QUESTION: 3**

You are designing an Azure application that processes graphical image files. The graphical Images are processed in batches by remote applications that run on multiple servers.

You have the following requirements:

The application must remain operational during batch-processing operations.

Users must be able to roll back each image to a previous version.

You need to ensure that each remote application has exclusive access to an image while the application processes the image. Which type of storage should you use to store the images?

- A. Table service
- B. A single Azure VHD that is attached to the web role
- C. Queue service
- D. Blob service

**Answer: D**

Explanation:

Explanation/Reference:

\* Blob Leases allow you to claim ownership to a Blob. Once you have the lease you can then update the Blob or delete the Blob without worrying about another process changing it underneath you. When a Blob is leased, other processes can still read it, but any attempt to update it will fail. You can update Blobs without taking a lease first, but you do run the chance of another process also attempting to modify it at the same time.

\* You can opt to use either optimistic or pessimistic concurrency models to manage access to blobs and containers in the blob service.
