**Answer: B**

**NEW QUESTION: 2**

DRAG DROP

You have a large list that contains more than 5,000 list items. You need to iterate through the list by using the Content Iterator to avoid getting an exception. You have the following code:

Which code segments should you include in Target 1, Target 2, Target 3, Target 4, Target 5 and Target 6 to complete the code? (To answer, drag the appropriate code segments to the correct location or locations in the answer area. Each code segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.) Select and Place:

**Answer:**

Explanation:

Explanation/Reference:

\* (Target 1, 4)

SPQuery.Query property

Syntax: public string Query { get; set; }

\* (Target 2, 3) ContentIterator

Provides helper methods that ensure lists can be queried while regulating the amount of data being transferred. This is especially important for queries on large lists or Web farms so that the load put on the database is not excessive.

\* (Target 5) SPContext

Use the SPContext class to return context information about such objects as the current Web application, site collection, site, list, or list item.

\*(Target 6) iterator.ProcessListItems

ContentIterator.ProcessListItems method (SPList, SPQuery, Boolean, ContentIterator.ItemProcessor, ContentIterator.ItemProcessorErrorCallout)

Processes list items.

**NEW QUESTION: 3**

You have a single-domain Active Directory Domain Services (AD DS) forest. You are using Microsoft Deployment Toolkit (MDT) 2010 to perform a Lite Touch Installation (LTI) of Windows 7 on client computers.

You need to ensure that users are not prompted for a computer name during the installation of Windows 7 on their client computers.

Which two actions should you perform? (Each correct answer presents part of the solution. Choose two.)

- A. Modify the CustomSettings.ini file.
- B. Create a new task sequence.
- C. Modify the BootStrap.ini file.
- D. Pre-create the computer accounts.

**Answer: A,B**
