NEW QUESTION: 1

A DevOps Engineer is reviewing a system that uses Amazon EC2 instances in an Auto Scaling group. This system uses a configuration management tool that runs locally on each EC2 instance. Because of the volatility of the application load, new instances must be fully functional within 3 minutes of entering a running state.

Current setup tasks include:

* Installing the configuration management agent - 2 minutes

- * Installing the application framework - 15 minutes
 - * Copying configuration data from Amazon S3 - 2 minutes
 - * Running the configuration management agent to configure instances - 1 minute
 - * Deploying the application code from Amazon S3 - 2 minutes
- How should the Engineer set up system so it meets the launch time requirement?

A. Write a bootstrap script to install the configuration management agent, install and the application framework, pull configuration data from Amazon S3, run the agent to configure the instance, and deploy the application from S3.

B. Build a custom AMI that includes the configuration management agent and application framework.

Write a bootstrap script to pull configuration data from Amazon S3, run the agent to configure the instance, and deploy the application from S3.

C. Build a custom AMI that includes the configuration management agent, application framework, and configuration data. Write a bootstrap script to run the agent to configure the instance and deploy the application from Amazon S3.

D. Trigger an AWS Lambda function from an Amazon CloudWatch Events rule when a new EC2 instance launches. Have the function install the configuration management agent and the application framework, pull configuration data from Amazon S3, run the agent to configure the instance, and deploy the application from S3.

Answer: A

NEW QUESTION: 2

While promoting an employee in the system, it is required that the HR specialist is able to see the name of the next three jobs the employee can progress to in the list of values contained in the Job field.
