NEW QUESTION: 1

- A. SELECT * FROM system..corrupted_pages
- B. WHERE event_type = 3
- C. WHERE event_type = 1
- D. SELECT * FROM msdb..suspect_pages
- E. SELECT * FROM system..suspect_pages
- F. WHERE event_type = 2
- G. SELECT * FROM msdb.. corrupted_pages

Answer: D,F

Explanation:

Explanation

suspect_pages contains one row per page that failed with a minor 823 error or an 824 error. Pages are listed in this table because they are suspected of being bad, but they might actually be fine. When a suspect page is repaired, its status is updated in the event_type column.

The suspect_pages table resides in the msdb database.

SalesDb3 has pages with checksum errors. Checksum errors have the event_type value 2.

Answer: A

Explanation:

Explanation

With AWS IAM, organizations can use the AWS Management Console to display, create, change or delete a password policy. As a part of managing the password policy, the user can enable all users to manage their own passwords. If the user has selected the option which allows the IAM users to modify their password, he does not need to set a separate policy for the users. This option in the AWS console allows changing only the password.

NEW QUESTION: 3

Scenario:

- A. Option E
- B. Option C
- C. Option A
- D. Option F
- E. Option D
- F. Option B

Answer: E

Explanation:

Here we see from the running configuration of R6 that distribute list 64 is being used in the outbound direction to all OSPF neighbors.

However, no packets will match the 6.6.0.0 in this access list because the first line blocks all 6.0.0.0 networks, and since the 6.6.0.0 networks will also match the first line of this ACL, these OSPF networks will not be advertised because they are first denied in the first line of the ACL.
