NEW QUESTION: 1

What are two advantages of a single-SSID deployment over a multi-SSID implementation? (Choose two.)

- A. Single-SSID deployments are more appropriate for BYOD environments.
- B. Only single-SSID deployments allow the user to verify the identity of the BYOD server.
- C. Single SSID deployments offer a more secure connection

experience than multi-SSID implementations.

D. Single-SSID deployments are more appropriate for clients that are already configured for wired 802.1x on another network.

E. Single-SSID deployments provide a better experience for users of iOS devices.

Answer: D,E

Explanation:

Explanation

Explanation/Reference

User experience is better for iOS users as SSID switching from OPEN to SECURED does not require user intervention. This is a unique capability of ISE where competitor solution forces user to login twice while ISE can take user information from 802.1X session without asking for the user to login again to the web portal.
