D. Configure access-list temp_acl_stand_ACL standard permit host 172.26.26.50.

E. Apply the access list to the temporary worker Group Policy.

F. Apply the access list to the temporary worker Connection Profile.

Answer: A,E

Explanation:

Web ACLs

The Web ACLs table displays the filters configured on the security appliance applicable to Clientless SSL VPN traffic. The table shows the name of each access control list (ACL), and below and indented to the right of the ACL name, the access control entries (ACEs) assigned to the ACL. Each ACL permits or denies access permits or denies access to specific networks, subnets, hosts, and web servers. Each ACE specifies one rule that serves the function of the ACL. You can configure ACLs to apply to Clientless SSL VPN traffic. The following rules apply:

- * If you do not configure any filters, all connections are permitted.
- * The security appliance supports only an inbound ACL on an interface.
- * At the end of each ACL, an implicit, unwritten rule denies all traffic that is not explicitly permitted.

You can use the following wildcard characters to define more than one wildcard in the Webtype access list entry:

- * Enter an asterisk "*" to match no characters or any number of characters.
- * Enter a question mark "?" to match any one character exactly.
- * Enter square brackets "["]" to create a range operator that matches any one character in a range.

The following examples show how to use wildcards in Webtype access lists.

- * The following example matches URLs such as `http://www.cisco.com/` and `http://wwz.caco.com/`:
