**NEW QUESTION: 1**

Which IPv6 migration method relies on dynamic tunnels that use the 2002::/16 reserved address space?

- A. ISATAP
- B. 6RD
- C. 6to4
- D. GRE

**Answer: C**

Explanation:

6to4 tunnel is a technique which relies on reserved address space 2002::/16 (you must remember this range). These tunnels determine the appropriate destination address by combining the IPv6 prefix with the globally unique destination 6to4 border router's IPv4 address, beginning with the 2002::/16 prefix, in this format:

2002:router-IPv4-address::/48

For example, if the router-IPv4-address is 64.101.64.1, the tunnel interface will have an IPv6 prefix of 2002:4065:4001:1::/64, where 4065:4001 is the hexadecimal equivalent of

64.101.64.1. This technique allows IPv6 sites to communicate with each other over the IPv4 network without explicit tunnel setup but we have to implement it on all routers on the path.

**NEW QUESTION: 2**

What detectors identify abnormal unusual behavior on a host or network?

- A. Anomaly detectors.
- B. None of the choices.
- C. Legitimate detectors.
- D. Normal detectors.

**Answer: A**

Explanation:

Anomaly detectors identify abnormal unusual behavior (anomalies) on a host or network. They function on the assumption that attacks are different from "normal" (legitimate) activity and can therefore be detected by systems that identify these differences. Anomaly detectors construct profiles representing normal behavior of users, hosts, or network connections. These profiles are constructed from historical data collected over a period of normal operation. The detectors then collect event data and use a variety of measures to determine when monitored activity deviates from the norm.
