NEW QUESTION: 1

DRAG DROP

You are planning the configuration of a virtual network switch for a Hyper-V environment.

The environment will contain the following Hyper-V hosts:

- A server named Server1 will have 10 virtual machines that must be able to communicate with each other. The virtual machines must be prevented from communicating with Server1 and all other servers on the corporate network.
- A two-node failover cluster named Cluster1 will have 20 virtual machines. The virtual machines will run on both nodes. Hyper-V hosts on the corporate network must be able to connect to the virtual machines.

Which type of virtual switch should you select for each Hyper-V host? To answer, drag the appropriate virtual switch types to the correct hosts. Each virtual switch type must be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NEW QUESTION: 2

Which of the following allows an organization to store a sensitive PKI component with a trusted third party?

- A. Trust model
- B. Private key
- C. Key escrow
- D. Public Key Infrastructure

Answer: C

Explanation:

Sensitive PKI data, such as private keys, can be put into key escrow data. The key escrow data can be kept at a trusted third party. Key escrow is an arrangement in which the keys needed to decrypt encrypted data are held in escrow so that, under certain circumstances, an authorized third party may gain

access to those keys. These third parties may include businesses, who may want access to employees' private communications, or governments, who may wish to be able to view the contents of encrypted communications.
