D. æ"•å½æãf;ãf^ãfªãffã, -ã, 'æðæè"¼ã•-ã•¼ã•™

**Answer: A**

#### NEW QUESTION: 2

Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1 that runs Windows Server 2012 R2 and has the DHCP Server server role installed. Server1 has an IPv6 scope named Scope1.

You implement an additional DHCP server named Server2 that runs Windows Server 2012 R2.

You need to provide high availability for Scope1. The solution must minimize administrative effort.

What should you do?

- A. Configure DHCP failover on Server1.
- B. Install and configure Failover Clustering on Server1 and Server2.
- C. Create a scope on Server2.
- D. Install and configure Network Load Balancing (NLB) on Server1 and Server2.

**Answer: A**

Explanation:

Overview: Configure DHCP failover using the DHCP console  
 To configure DHCP failover using the DHCP console, right-click a DHCP scope or right-click IPv4 and then click Configure Failover.

### Configure Failover

The Configure Failover wizard guides you through configuring DHCP failover on the selected scope.

Note: The DHCP server failover feature, available in Windows Server 2012 and later, provides the ability to have two DHCP servers provide IP addresses and option configuration to the same subnet or scope, providing for continuous availability of DHCP service to clients.

Incorrect:

Not A. NLB is not related to DHCP scope availability.

Not B. DHCP failover requirements include:

DHCP Scopes requirement:

At least one IPv4 DHCP scope must be configured on the primary DHCP server.

The same DHCP scope ID, or an overlapping scope, must not be configured on the failover partner.

Not D. Failover clustering is possibly, but would not minimize administration.

Reference: Deploy DHCP Failover

### NEW QUESTION: 3

Businesses are increasingly dependent on their information systems. A Business Impact Analysis (BIA) is a process that identifies and evaluates the potential effects of a system disruption. The BIA is composed of the following three steps: Determine mission/business processes and recovery criticality. Mission/business processes supported by the system are identified and the impact of a system disruption to those

- A. Determine mission/business processes and recovery criticality.
- B. Identify mission/business processes supported by the system.
- C. Determine the impact of a system disruption to those processes.
- D. Identify the impact of a system disruption to those processes.

**Answer: A**

Explanation:

Explanation

The BIA is composed of the following three steps: Determine mission/business processes and recovery criticality.

Mission/business processes supported by the system are identified and the impact of a system disruption to those

processes is determined along with outage impacts and estimated downtime.

#### NEW QUESTION: 4

#### Answer:

Explanation:

Explanation

Step 1: Create a repository

A Git repository, or repo, is a folder that you've told Git to help you track file changes in. You can have any number of repos on your computer, each stored in their own folder.

Step 2: Create a branch

Branch policies help teams protect their important branches of development. Policies enforce your team's code quality and change management standards.

Step 3: Add a build validation policy

When a build validation policy is enabled, a new build is queued when a new pull request is created or when changes are pushed to an existing pull request targeting this branch. The build policy then evaluates the results of the build to determine whether the pull request can be completed.

Scenario:

Implement a code flow strategy for Project2 that will:

Enable Team2 to submit pull requests for Project2.

Enable Team2 to work independently on changes to a copy of Project2.

Ensure that any intermediary changes performed by Team2 on a copy of Project2 will be subject to the same restrictions as the ones defined in the build policy of Project2.
