Because there are all the keypoints of the subject in our PDI training guide.

NEW QUESTION: 1

To specify the node name for the NAS file server when processing NAS file systems, use the NASNODENAMEoption on the command line, or place in which file?

- A. Client options file
- B. Backup copy group
- C. Include/exclude list
- D. Server options file

Answer: A

Explanation:

Explanation/Reference:

Use the nasnodename option to identify the NAS file server. Place the nasnodename option in your client system-options file (dsm.sys). The value in the client system-options file is the default, but this value can be overridden on the command line. If the nasnodename option is not specified in the client

system-options file, you must specify this option on the command line when processing NAS file systems.
