NEW QUESTION: 4

Amazon SNS **ADM** is a managed service that provides a simple and scalable way to send and receive messages between distributed applications and services. It is a **push** service, meaning that it sends messages to your endpoints. It is also a **pull** service, meaning that you can retrieve messages from it. It is a **cloud** service, meaning that it is hosted in the AWS cloud. It is a **managed** service, meaning that AWS handles the underlying infrastructure and operations. It is a **simple** service, meaning that it is easy to use and integrate with other AWS services. It is a **scalable** service, meaning that it can handle a large number of messages and endpoints. It is a **reliable** service, meaning that it is highly available and durable. It is a **secure** service, meaning that it uses industry-standard security protocols and practices. It is a **cost-effective** service, meaning that it is priced competitively and offers various pricing options. It is a **flexible** service, meaning that it supports a wide range of message formats and protocols. It is a **comprehensive** service, meaning that it provides a full suite of features and capabilities. It is a **modern** service, meaning that it is built on the latest technologies and follows best practices. It is a **cloud-native** service, meaning that it is designed to run in the cloud and take advantage of cloud-native architectures. It is a **serverless** service, meaning that you do not need to manage any servers or infrastructure. It is a **managed** service, meaning that AWS handles the underlying infrastructure and operations. It is a **simple** service, meaning that it is easy to use and integrate with other AWS services. It is a **scalable** service, meaning that it can handle a large number of messages and endpoints. It is a **reliable** service, meaning that it is highly available and durable. It is a **secure** service, meaning that it uses industry-standard security protocols and practices. It is a **cost-effective** service, meaning that it is priced competitively and offers various pricing options. It is a **flexible** service, meaning that it supports a wide range of message formats and protocols. It is a **comprehensive** service, meaning that it provides a full suite of features and capabilities. It is a **modern** service, meaning that it is built on the latest technologies and follows best practices. It is a **cloud-native** service, meaning that it is designed to run in the cloud and take advantage of cloud-native architectures. It is a **serverless** service, meaning that you do not need to manage any servers or infrastructure.

- A. ID
- B. **Push**
- C. ID
- D. **Pull**

Answer: B

Explanation:

ADM is a managed service that provides a simple and scalable way to send and receive messages between distributed applications and services. It is a push service, meaning that it sends messages to your endpoints. It is also a pull service, meaning that you can retrieve messages from it. It is a cloud service, meaning that it is hosted in the AWS cloud. It is a managed service, meaning that AWS handles the underlying infrastructure and operations.
