Which three statements are true about shared storage capabilities on NFS volumes supported by ESX Server? Select three.

- A.** You can boot virtual machines stored on NFS mounted volumes.
- B.** you can configure ESX Server to boot from NFS mounted volumes
- C.** You can use VMotion
- D.** You can create virtual machines on NFS mounted volumes.
- E.** you can create VMFS datastores on NFS mounted volumes.

**Answer: A,C,D**

Explanation:

ESX3.5 Configuration Guide Pg. 93 NFS Datastore ESX Server 3 can access a designated NFS volume located on a NAS server, mount this volume, and use it for its storage needs. You can use NFS volumes to store and boot virtual machines in the same way you use VMFS datastores. ESX Server 3 supports the following shared storage capabilities on NFS volumes:

Use VMotion.

\*Use VMware DRS and VMware HA.

\*Mount ISO images, which are presented as CD-ROMs to virtual machines.

\*Create virtual machine snapshots. See Basic System

Administration at Not D: NFS only support file level not block level. Only block level like FC and iScsi can create VMFS datastore. So, NFS does not allow to create VMFS datastore on NFS volumes. [www.vmware.com/support/pubs/](http://www.vmware.com/support/pubs/).
