NEW QUESTION: 1

domain.com accesses a host-based line-of-business application using a standard telnet session and terminal emulator, as well as accessing other electronic documents from their mixed network environment. Documents are typically scanned, routed between departments, and captured from the host print queues. Which of the following is the most cost-effective solution to implement?

- A. An RDBMS integrated into the system using EDI.
- B. A custom developed mainframe-based system, including multiple high-speed scanners and printers.
- C. A network-based document management system that will use screen-scraping to image-enable the host system.
- D. A host-based workflow system with imaging and COLD capabilities.

Answer: D

NEW QUESTION: 2

AWS Identity and Access Management (IAM) is a service that helps you securely control access to AWS resources. You use IAM to control who is authenticated (AWS accounts), authorized (policies), and audited (AWS CloudTrail).

- A. Amazon API Gateway
- B. Amazon Virtual Private Cloud (Amazon VPC)
- C. AWS Direct Connect
- D. AWS IAM

Answer: B

NEW QUESTION: 3

Task: Determine the types of attacks below by selecting an option from the dropdown list.

Answer:

Explanation:

Explanation

A: Phishing is the act of sending an email to a user falsely claiming to be an established legitimate enterprise in an attempt to scam the user into surrendering private information that will be used for identity theft. Phishing email will direct the user to visit a website where they are asked to update personal information, such as a

password, credit card, social security, or bank account numbers, that the legitimate organization already has. The website, however, is bogus and set up only to steal the information the user enters on the page.

B: Whaling is a specific kind of malicious hacking within the more general category of phishing, which involves hunting for data that can be used by the hacker. In general, phishing efforts are focused on collecting personal data about users. In whaling, the targets are high-ranking bankers, executives or others in powerful positions or job titles. Hackers who engage in whaling often describe these efforts as "reeling in a big fish," applying a familiar metaphor to the process of scouring technologies for loopholes and opportunities for data theft. Those who are engaged in whaling may, for example, hack into specific networks where these powerful individuals work or store sensitive data. They may also set up keylogging or other malware on a work station associated with one of these executives. There are many ways that hackers can pursue whaling, leading C-level or top-level executives in business and government to stay vigilant about the possibility of cyber threats.

C: Vishing is the act of using the telephone in an attempt to scam the user into surrendering private information that will be used for identity theft. The scammer usually pretends to be a legitimate business, and fools the victim into thinking he or she will profit.

D: SPIM is a term sometimes used to refer to spam over IM (Instant Messaging). It's also called just spam, instant spam, or IM marketing. No matter what the name, it consists of unwanted messages transmitted through some form of instant messaging service, which can include Short Message Service (SMS)

E: Social engineering is a non-technical method of intrusion hackers use that relies heavily on human interaction and often involves tricking people into breaking normal security procedures. It is one of the greatest threats that organizations today encounter. A social engineer runs what used to be called a "con game." For example, a person using social engineering to break into a computer network might try to gain the confidence of an authorized user and get them to reveal information that compromises the network's security.

Social engineers often rely on the natural helpfulness of people as well as on their weaknesses. They might, for example, call the authorized employee with some kind of urgent problem that requires immediate network access. Appealing to vanity, appealing to authority, appealing to greed, and old-fashioned eavesdropping are other typical social engineering techniques.

NEW QUESTION: 4

A physician orders a serum creatinine for a hospitalized client. The nurse should explain to the client and his family that this test:

- A. is a better indicator of renal function than the BUN.
- B. is normal if the level is 4.0 to 5.5 mg/dl.
- C. can be elevated with increased protein intake.
- D. reflects the fluid volume status of a person.

Answer: A

Explanation:

A serum creatinine level should be 0.7 to 1.5 mg/dl, and it does not vary with increased protein intake, so it is a better indicator of renal function than the BUN. Physiological Adaptation
